CURRENT HERPETOLOGICAL TITLES, XVIII: 1970 - 1971

Herpetological Information Search Systems

We have brought to your attention more than 13,000 current titles in the pages of this journal to date.

The titles of papers appearing in our lists were obtained by regular indexing of about 1,500 journals directly and over 2,000 indirectly, through secondary sources such as Dissertation Abstracts, Index to Zoological Periodicals, and several others. These in English also appear, for example, in the following. Dissertation Abstracts and various academic publications. Abstracts of papers presented at various meetings and symposia are also included. The coverage of books and these journals in the literature dating other than 1970 is improving because of a larger number of our colleagues bring those titles to our attention. However, some titles may have been added directly to us for inclusion in our lists. However, we still appreciate, both for awareness of new titles, reports, and non-English titles.

We realize that many of the titles listed are marginal to the field of herpetology as currently defined. Many are published in journals of a highly specialized nature, such as physiology, morphology, cytology, or embryology. Others are of a general nature, such as fish and other publications, or pet animal journals. They may not be of interest to at least some readers. If any, or HERPETOLOGICAL REVIEW, it seems better to let the reader make the selection from the list, rather than one of our small group do this for us, or any other organization, for that matter. This is not intended to interest anyone.

Our present policy, then, is to list the title of any current paper (e.g., 1970-1971) that is concerned with a number of a recent order of amphibians or reptiles.

HERPETOLOGICAL REVIEW has appeared biennially, beginning with Volume 5 (1931). It is our hope that the titles published here will be ever more current. We note that the amount of material will serve to reduce the titles-per-issue to a more manageable number.

Except for the omission of extinct orders, our list is complete as far as we can determine of the Amphibia and Reptilia. Each section is arranged in alphabetical order and includes, as nearly as Hazard feasible, spelling errors and current and minor changes. This list contains titles of books and articles that appeared during the period from 1 July to 31 January 1971. Periodical titles should be regarded as Standard for Periodical Title Abbreviations (1970-1983) (American National Standards Institute, New York, 1970) in the period of accuracy. Many authors are considered more recent.

ACKNOWLEDGMENTS. This list was prepared by the HISS staff: R. D. Bolling, J. Gillmor, J. Finney, and J. G. Sanders. The list is the result of the joint efforts of many persons, and we are grateful to all who have contributed to this project. We are especially grateful to the University of Miami staff of the Institute for Coral Reef Studies, who were able to a difficult job.

The list is the result of an ongoing project to provide a better understanding of the various conditions and environments, and we are grateful to all who have contributed to this project. We are especially grateful to the University of Miami staff of the Institute for Coral Reef Studies, who were able to a difficult job.

HERPETOLOGICAL REVIEW includes a wide variety of topics, from basic biology to applied science, and is a valuable resource for researchers and students alike. It provides a comprehensive overview of the latest developments in the field of herpetology, covering topics such as taxonomy, phylogeny, and ecology. The journal is published biennially, and it is available online at the following URL:

HERPETOLOGICAL REVIEW (URL: http://www.herpetologicalreview.org/)
